provided for attachment by the bees of the foundation sheet to the frame as they build up the comb after the foundation sheet has fully stretched or expanded, so that the  
5 frame with the comb therein may be readily handled without fear of damage.

What I claim as my invention is:

A device of the character described, comprising a frame including top, bottom and

side bars, the bottom bar having a slot cut  
therein throughout the inside length of the  
frame and a foundation suspended from the  
top bar with its lower end hanging freely  
in the bottom bar slot, whereby expansion of  
the foundation is accommodated. 10 15

In testimony whereof I affix my signature.

GEORGE GORDON FRATER.
